The Division of Pediatric Gastroenterology, Hepatology and Nutrition at Boston Children’s Hospital is seeking a full time pediatric gastroenterologist to join our state-of-the-art Center for Motility and Functional Gastrointestinal Disorders.

Appointment as an Assistant or Associate Professor at the Harvard Medical School will be commensurate with experience, training and achievements in addition to teaching activities. Suitable candidates will have an M.D. and be BC/BE in Pediatric Gastroenterology and have completed specialized training in motility and functional GI disorders including the performance of motility procedures. The candidate must have demonstrable experience in clinical motility with specific interest in management of complex colorectal disorders and a strong interest in clinical research. The applicant will be expected to be active clinically and to supervise Medical Students, Internal Medicine Residents and Gastroenterology Fellows. The successful candidate would be expected to fully integrate with the Center’s internationally renowned cross-disciplinary efforts.

The Center for Motility and Functional Gastrointestinal Disorders is an NIH and foundation funded center that focuses on the multidisciplinary treatment of children with motility and functional disorders. The focus of the center is to improve the care of children through cutting edge clinical care grounded in strong multidisciplinary clinical, translational and basic research. The center deals with complex motility and functional patients referred nationally and internationally to the center making it a rich environment for career development and growth. To address the complex needs of these patients, the center has multiple multidisciplinary clinics to support a high level of patient care. To further support the mission to provide state-of-the-art care, the center has all of the critical motility diagnostic tools needed including high-resolution esophageal, antroduodenal, colonic manometry systems, endoflip, wireless motility capsule testing, and impedance testing.

Candidate will be joining a multidisciplinary motility center composed of passionate physicians, nurse practitioners, registered nurses, psychologists, dieticians, social workers, administrative support and research assistants.
The Center for Motility and Functional Gastrointestinal Diseases is part of the Pediatric Gastroenterology Division at Boston Children’s Hospital. We are an equal opportunity employer and all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, national origin, disability status, protected veteran status, gender identity, sexual orientation, pregnancy and pregnancy-related conditions or any other characteristic protected by law.

Interested candidates should send a personal statement with research interest, three potential referees and Curriculum Vita to:
