Maternal Fetal Medicine Fetal Interventionalist

Fetal therapies—both surgical and genetic—are a significant part of the promise of new treatments and prevention in pediatric care. Boston Children’s Hospital is intensifying its commitment to developing this area by expanding its Advanced Fetal Care Center to form a new maternal fetal program. The program will offer the full spectrum of both open and fetoscopic approaches for fetal anomalies. The adjoining Brigham and Women’s Hospital will be a key partner in the program, which will be known as Boston Children’s Maternal Fetal Care Center in affiliation with the Brigham and Women’s Hospital. The Center will also work closely with its longstanding collaborator, the Beth Israel Lahey Health System, now the second largest health system in the Commonwealth, as well as with other obstetrical services in the area. Boston Children’s Hospital seeks applicants who are board certified or board eligible in Maternal Fetal Medicine, with special training and expertise in fetal interventions, to assume a key leadership role in the development and ongoing operations of the Center. The selected candidate will work collaboratively with a team of expert pediatric surgeons and subspecialists in maternal, fetal, and neonatal medicine.

Faculty rank will be commensurate with qualifications and experience of the successful candidate at the associate or full professor levels at Harvard Medical School. A strong commitment to teaching, research, and clinical care is required.

We are an equal opportunity employer and all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, national origin, disability status, protected veteran status, gender identity, sexual orientation, pregnancy and pregnancy-related conditions or any other characteristic protected by law.

Boston Children’s Hospital is committed to increasing the diversity of our faculty. Women and members of minority groups are encouraged to apply. Please forward a Curriculum Vitae and inquiries to:

About Boston Children's Hospital

Boston Children’s Hospital is home to the world's largest research enterprise based at a pediatric medical center, where its discoveries have benefited both children and adults since 1869. More than 1,100 scientists, including seven members of the National Academy of Sciences, 11 members of the Institute of Medicine and 10 members of the Howard Hughes Medical Institute comprise Boston Children’s research community. Founded as a 20-bed hospital for children, Boston Children's today is a comprehensive center for pediatric and adolescent health care with 415 beds, proudly celebrating its 150th anniversary. Boston Children's is ranked the no. 1 Children’s Hospital by U.S. News and World Report. It is the primary pediatric teaching affiliate of Harvard Medical School.
