Combined Simulation Fellowship and Anesthesiology Faculty Position

A faculty position is available in the Department of Anesthesiology, Critical Care and Pain Medicine of Boston Children’s Hospital, affiliated with Harvard Medical School for a one-year combined position as Pediatric Simulation Fellow within the Boston Children’s Hospital Simulator Program and member of our Division of Perioperative Anesthesia. The position is designed to offer a highly qualified pediatric anesthesiologist an opportunity to gain expertise and skills in development and delivery of advanced simulation-based training and systems testing as well as state of the art simulation center and programmatic development.

This individual will design simulation curricular offerings, lead simulation training courses, and supervise clinical simulation training sessions for trainees and HMS faculty in all clinical departments at Boston Children’s Hospital. Debriefing of HMS faculty at all academic ranks undergoing simulations of crisis management of acute care events will be an important part of this fellowship; this requires a high level of ability to critique clinical performance of faculty in crisis situations in a diplomatic and constructive manner. During clinical work providing anesthesia care and running simulation courses, a large portion of professional time is spent teaching HMS trainees and faculty and developing educational materials.

Requirements include an MD degree and completion of residency training in anesthesiology and fellowship training in pediatric anesthesiology. Candidates must be certified in anesthesiology and pediatric anesthesiology by the American Board of Anesthesiology. Academic rank at Harvard Medical School as Instructor and salary will be commensurate with qualifications and experience.
We are an equal opportunity employer and all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, national origin, disability status, protected veteran status, gender identity, sexual orientation, pregnancy and pregnancy-related conditions or any other characteristic protected by law.
