The Department of Pathology at Brigham and Women's Hospital, a principal teaching affiliate of Harvard Medical School, is seeking an academically oriented, board-certified pathologist with established diagnostics skills in hematopathology and an interest in clinical-translational research. The successful applicant’s principal clinical duties will be service/patient care responsibilities in hematopathology. Certain faculty may also cross-cover molecular diagnostic services, and board certification in molecular pathology is desirable. Clinical hematopathology responsibilities may include interpretation of bone marrow aspirates and biopsies, lymph nodes, peripheral blood, flow cytometry, immunohistochemistry, and laboratory hematology, as well as teaching of fellows and residents. The Hematopathology service is currently staffed by 11 faculty and 3 Fellows, who collectively handle over 5,500 surgeries and 1,000,000 hematology specimens annually. The environment provides substantial opportunities for clinical and translational research within the Department as well as through collaboration with investigators at other Harvard-affiliated institutions, including the Dana-Farber Cancer Institute, where there are busy multidisciplinary lymphoma, leukemia, myeloma, and transplant programs. A research focus centered on lymphoma is desirable but not required. Applicants should be committed to patient care, research, scholarship, and teaching. Academic rank at Instructor, Assistant Professor or Associate Professor and salary will be commensurate with experience and accomplishments.

Please send curriculum vitae and names and addresses of three references to:
Jon C. Aster, MD, PhD
Chief, Hematopathology
