WOMEN'S HOSPITAL**

**HARVARD MEDICAL SCHOOL
TEACHING HOSPITAL**

**The Division of Allergy and Clinical Immunology
Brigham and Women's Hospital**

The Division of Allergy and Clinical Immunology at Brigham and Women's Hospital seeks a full time, Allergy/Immunology-trained physician scientist for translational research and patient care. We are seeking to expand our competitive translational research program in allergy, with a scientific focus on allergen desensitization and the mechanisms of immune tolerance. This position will be largely NIH-funded, and will involve integration into an existing translational research team led by Dr. Tanya Laidlaw, who will provide direct scientific and career mentorship for the candidate. This position provides an ideal opportunity for candidates who are interested in an academic career exploring the underlying mechanisms of clinical allergy and immune tolerance – the long-term goal is to identify novel targets for therapeutic intervention in human allergic diseases. Applicants should hold a PhD and/or MD degree in Allergy or Immunology and should have expertise in molecular biology, clinical trial data interpretation and analysis, and manuscript preparation. The successful candidate will also engage in teaching medical students, fellows in the clinic and inpatient settings.

Academic rank as Instructor, Assistant Professor or Associate Professor at Harvard Medical School will be commensurate with experience and qualification.

Send CV to:
