

Senior Scientist

We seek a highly motivated and organized individual to help lead our efforts to investigate the molecular basis of blood and immune cell production and its disruption in disease. We are seeking a scientist at the Instructor level with a Ph.D. or equivalent degree, with relevant research experience in hematology and/or immunology. The ideal individual will conduct their own research projects integrating results from human genetic studies with functional analyses of human hematopoiesis. This individual will also help oversee our laboratory, provide guidance to trainees and staff members, help lead and provide managerial oversight for laboratory projects, be involved in conceiving new scientific directions/ projects with the principal investigator, and help in writing and organizing grants. This is an ideal position for someone interested in leading projects and conducting research in an independent manner, without excessive administrative responsibilities.

We envision this being a long-term position in our laboratory with the possibility of promotion to associate director of the laboratory. This individual will help to promote the culture of our laboratory as an intellectually engaging, rigorous, productive, and positive workplace. They will be provided with many opportunities to develop projects, author manuscripts, participate in collaborations, and develop an international reputation in this field.

Women and members of under-represented minorities are encouraged to apply. Salary offered will be consistent with fair market rate and commensurate with experience.

The Dana-Farber/Boston Children's Cancer and Blood Disorders Center has a faculty numbering more than 100, with exceptional research and clinical programs in non-malignant hematology, hematologic malignancies, solid tumors, and neuro-oncology.

Interested candidates should submit a curriculum vitae, a statement of interest, and three letters of recommendation to:
