

## Director, Molecular Pathology, Mass General Brigham Assistant, Associate or full Professor in Pathology, Harvard Medical School

The Departments of Pathology at Brigham & Women's Hospital (BWH) and Mass General Hospital (MGH) seek applications for a faculty member with expertise in molecular pathology to direct the molecular diagnostic and cytogenetic laboratories across the Mass General Brigham (MGB) Healthcare System. This is a ladder faculty position and the successful candidate may be appointed at the level of Assistant, Associate, or full Professor at Harvard Medical School commensurate with experience. The successful candidate will lead lab operations and strategic planning initiatives at MGB, which provides molecular diagnostic services to BWH and MGH, the Dana-Farber Cancer Institute, and Boston Children's Hospital. The successful candidate will have the chance to build on existing inhouse strengths in molecular pathology at a time when MGB, the parent organization for BWH and MGH, is planning a significant investment in MGB clinical laboratories across its system. This represents a remarkable opportunity to help lead the strategic planning and implementation of molecular diagnostic testing across a large and highly respected academic healthcare system.

Candidates are expected to have an MD or equivalent medical degree with an established focus and academic record in molecular pathology, demonstrated communication skills, and commitment to collaborating across disciplines (e.g., oncology, surgery, obstetrics). Preference will be given to candidates with extensive experience in oncological molecular pathology. The successful candidate will also participate in teaching activities at BWH, MGH, and Harvard Medical School.

Please forward curriculum vitae, list of publications and references, a brief statement of molecular pathology/cytogenetic interests, and a diversity and inclusion statement by September 1<sup>st</sup>, 2023 to:
